Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

This action is responsive to the communication filed April 9, 2004.

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-38 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 1 recites the limitation "said fluid passageway of said fitting" in lines 6-7. There is insufficient antecedent basis for this limitation in the claim. It is further indefinite in that it is unclear if the fluid passageways of both ends are being referenced or not. It is further not clear what lines 5-6 even mean.

Claim 36 recites the limitation "said respective fluid paths" in line 2. There is insufficient antecedent basis for this limitation in the claim.

Claim 36 recites the limitation "said third fluid path" in line 2. There is insufficient antecedent basis for this limitation in the claim.

Claims 36-38 are not treated on the merits below in that there is little hope of determining the scope and content of these claims.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1, 3, 29-30, 33-35, 39-41 are rejected under 35 U.S.C. 102(e) as being anticipated by Ohmi et al (US 5,983,933).

Ohmi et al show a gas stick with fittings 46, 59 for communicating with surface mount components. The openings in blocks 42, 44 receiving the ends of 46 appear to be counterbores.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 2 and 31-32 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ohmi et al in view of Fukushima et al (US 6,012,479).

Ohmi et al show the claimed structure except for the seals. Fukushima et al show a gas stick with metal gasket 59 for sealing the components to the base, see Figure 8 and column 8, lines 44+. It would have been obvious for one of ordinary skill in the art at the time the invention was made to have used such seals to seal the Ohmi et al components.
